**\*Plants with minimal or no soil have minimal or no mycorrhizal relationships.**

This list is constantly updated as new species are identified with or without mycorrhizal relationships. Please check our website ([www.mycorrhizae.com](http://www.mycorrhizae.com)) for the latest update. If a family or genus is not included on the list, then an internet search may be helpful. However, if you are performing trials, then the use of Sumitomo mycorrhizae product will not cause harm to your plants. If you wish to confirm colonization of an unlisted plant in your trials, then follow the instructions on the Trial Analysis sheet for submission directions and fee.
