WHAT MAKES A GOOD, STABLE SC FUNGICIDE FORMULATION?

- The quality of the technical grade material that goes into it
- The particle size specification to which the tech is milled
- The composition and balance of the formulation
- The degree of quality control applied to manufacturing

STORAGE STABILITY OF SUMISCLEX® 500

As a requirement for registration of conventional chemical products, APVMA requires storage stability data that demonstrates a product will achieve a minimum two year shelf life, regardless of formulation type.

There is no reason to believe that quality, well manufactured SC formulations are less capable of long term storage than other formulation types.

Both accelerated storage tests and real-time analysis of aged **SUMISCLEX 500** retention samples confirm 100% formulation and active ingredient integrity well beyond the minimum mandatory two year period.

The formulation of **SUMISCLEX 500** has remain unchanged for two decades. There have been no recorded incidents of formulation breakdown with this time-tested product.
